Plant-based oils and oleins

Plant-based oils and oleins are key natural ingredients in cosmetics and food for their nutritional properties and health benefits.

In cosmetics, oils such as almond, jojoba and argan, together with oleins (liquid fractions of oils), are used to moisturise, regenerate and soften the skin, being essential components in creams, serums and hair products. They provide essential fatty acids, vitamins and antioxidants, promoting skin elasticity and protection.

In food, vegetable oils such as olive and sunflower oil, together with oleins, are used for cooking or as dressings. They also provide healthy fats, improve the taste of food and are a natural source of energy. Their versatility makes them essential ingredients in both sectors.

Essential oils

Essential oils are natural extracts obtained from aromatic plants, known for their therapeutic properties and unique fragrances. Each oil has a unique profile, ranging from relaxing like lavender to stimulating like lemon or eucalyptus. They are used in aromatherapy, cosmetics and general wellness to promote relaxation, relieve stress and improve mood. In addition, their antibacterial and anti-inflammatory properties make them valuable in health and beauty treatments, making them a natural and versatile choice.

Essential oils are also used in food for their aromatic properties and potential benefits. Some oils, such as lemon, peppermint and basil, are used to enhance flavours and preserve food due to their antimicrobial properties.

Vegetable butters

Vegetable butters, such as shea, cocoa and mango, are natural fats extracted from seeds and fruits. In cosmetics, they stand out for their ability to nourish, moisturise and regenerate the skin, thanks to their high content of fatty acids, vitamins and antioxidants. They are ideal for products that seek to soften and protect the skin, such as creams, lip balms and hair treatments.

In food, these butters are appreciated for their creamy texture and their ability to improve the consistency of products such as chocolates, pastries and ice cream. They are also a healthy vegan option, as they contain no animal fats. Their versatility makes them essential ingredients in both the cosmetics and food industries.

Floral hydrolats and water extracts

Floral hydrosols, also known as floral waters, are by-products of the distillation process of essential oils.

In cosmetics, they are used for their softening, toning and moisturising properties, and are ideal for all skin types, even the most sensitive. Hydrolats such as rose, lavender or orange blossom help to soothe, refresh and balance the skin, providing gentle, natural care.

In food, hydrolats are used as natural flavourings due to their mild fragrance and low concentration of active compounds. They are incorporated into recipes for drinks, desserts and sauces, providing a delicate touch without affecting food safety. These extracts offer a natural and versatile alternative in both personal care and gourmet cooking.

Plant extracts

Plant extracts are natural derivatives obtained from various parts of plants, such as leaves, roots, flowers or fruits, and are widely used in cosmetics and food. In cosmetics, they provide antioxidant, moisturising and regenerating properties, making them ideal for products that seek to improve the health of skin and hair. Extracts such as aloe vera, green tea or chamomile are common in creams, tonics and shampoos for their soothing and revitalising effects.

In food, plant extracts are used as natural flavourings, colourings and preservatives. Ingredients such as vanilla extract, rosemary or turmeric not only provide flavour, but also nutritional benefits. These extracts offer a natural and healthy alternative and are highly appreciated for their versatility in both the cosmetics and food industries.

WHITE GRAPEFRUIT INFUSED OIL	<i>Citrus paradisi</i>		
WHITE NETTLE INFUSED OIL	<i>Lamium album</i>		
WHITE OAK INFUSED OIL	<i>Quercus alba</i>		
WHITE TRUFFLE INFUSED OIL	<i>Tuber aestivum</i>		
WHITE WATERLILY INFUSED OIL	<i>Nymphaea alba</i>		
WHITE WILLOW INFUSED OIL	<i>Salix alba</i>		
WILD CHAMOMILLE INFUSED OIL	<i>Ormenis multicaulis</i> (Syn: <i>Cladanthus mixtus</i> , <i>Ormenis mixta</i>)		
WILD PANSY INFUSED OIL	<i>Viola tricolor</i>		
WILD STRAWBERRY INFUSED OIL	<i>Fragaria vesca</i>		
WILD YAM INFUSED OIL	<i>Dioscorea villosa</i>		
WINTER TRUFFLE INFUSED OIL	<i>Tuber brumale</i>		
WINTERGREEN FRAGRANTISSIMA INFUSED OIL	<i>Gaultheria fragrantissima</i>		
WINTERGREEN PROCUMBENS INFUSED OIL	<i>Gaultheria procumbens</i>		
WITCH HAZEL INFUSED OIL	<i>Hamamelis virginiana</i>		
YARROW INFUSED OIL	<i>Achillea millefolium</i>		
YERBA MATE INFUSED OIL	<i>Ilex paraguariensis</i>		
YLANG YLANG INFUSED OIL	<i>Cananga odorata</i>		

Seeds, scrubs, dried plants and seaweeds

Seeds, scrubs, dried plants and seaweeds are natural ingredients valued in both cosmetics and food for their multiple benefits.

In cosmetics, seeds, such as chia or grape seeds, and natural exfoliants, such as crushed peels, are used to exfoliate and nourish the skin, promoting skin renewal. Dried plants, such as chamomile and calendula, provide soothing and regenerating properties, while algae, such as seaweed, moisturise and detoxify, and are common in masks and anti-ageing products.

In food, the seeds provide essential nutrients such as protein and fibre, while the algae, rich in minerals, are incorporated into salads, soups and supplements. Dried plants are used as infusions or condiments. These ingredients offer healthy and sustainable solutions in both sectors.

Trade name	Botanical name	 Ecologic	 Conventional
AMARANTH SEEDS	<i>Amaranthus caudatus</i>		
ANGELICA SEEDS	<i>Angelica archangelica</i>		
ANISE SEEDS	<i>Pimpinella anisum</i>		
APRICOT SCRUB	<i>Prunus armeniaca</i>		
BAOBAB SCRUB	<i>Adansonia digitata</i>		
BILBERRY SEEDS	<i>Vaccinium myrtillus</i>

Waxes, resins and clays

Resins, waxes and clays are natural ingredients used in cosmetics and food for their multiple benefits.

In cosmetics, resins such as frankincense and myrrh are valued for their antioxidant and regenerative properties, helping to repair the skin and combat the signs of ageing. Waxes, such as beeswax or candelilla wax, provide hydration and protection, and are common in balms, creams and lip products. Clays, such as bentonite or kaolin, are used in masks and scrubs for their purifying and detoxifying properties.

In food, waxes are used to coat and preserve food, while some resins are used as natural additives or thickeners. These ingredients offer versatile, healthy and natural solutions in cosmetics as well as in the culinary field.

Absolutes and oleoresins

Absolutes and oleoresins are concentrated plant extracts, used in cosmetics and food for their powerful aromatic properties and benefits.

In cosmetics, absolutes, such as jasmine or rose, are used for their intense fragrance and soothing properties, and are key ingredients in perfumes, creams and luxury products. Oleoresins, rich in bioactive compounds, provide antioxidants and regenerative properties, ideal for skin and hair treatments.

In food, oleoresins, such as vanilla or pepper, are used to intensify flavours and aromas in products such as sauces, beverages and confectionery. Their high concentration allows for longer shelf life and stability in food preparations. Both absolutes and oleoresins offer natural, effective and versatile solutions in both sectors.

Others

Natural, 100% pure and natural ingredients such as essential oils, plant extracts, seeds, waxes and clays are widely used in cosmetics and food for their health and wellness benefits.

In cosmetics, these ingredients offer moisturising, regenerating and antioxidant properties, making them ideal for skin and hair care. Oils such as argan oil, clays such as kaolin and waxes such as beeswax help to nourish, soften and protect, while natural exfoliants such as seeds and peels promote cell renewal.

In food, ingredients such as seeds, seaweeds and oleoresins provide essential nutrients, antioxidants and flavour, improving food quality in a natural and healthy way. Their use reflects a trend towards more sustainable and environmentally friendly products in both sectors.
