

BOTALYS

FJORD

RHODIOLA

FLAWLESS FJORD RHODIOLA

ABSOLUTE
PURITY

100% RHODIOLA ROSEA

**DNA CERTIFIED
ROOTS**

Botalys Fjord Rhodiola authenticity is certified through DNA testing and molecular fingerprinting to ensure the highest purity and eliminate any risk of adulteration. It is grown in a purified indoor environment, protecting it from contamination by pesticides or heavy metals.

SUPERIOR
QUALITY

**FULL SPECTRUM
WITH 3%
SALIDROSIDE**

Salidroside is the primary bioactive constituent of Rhodiola, and its concentration depends on both the plant's age and its growing conditions. Botalys Fjord Rhodiola naturally contains 3% salidroside, which is equivalent to that found in a 15-year-old or older root grown in the climate of Northern Europe.

SUSTAINABLE
SOURCING

**ZERO
WILD
PLUNDERING**

According to a CITES report, more than 70% of the Rhodiola population has been plundered in some regions. Botalys provides a truly sustainable, pesticide-free source of Rhodiola, grown in our own vertical farm powered by solar panels. Each batch delivered is fully compliant with CITES regulations.

RESILIENT
SUPPLY

**GROWN IN BELGIUM
FROM SEED TO
INGREDIENT**

Our Fjord Rhodiola is both grown and processed at our own facilities in Belgium. The entire process, from seed to ingredient, is FSCC-22000 certified. We harvest year-round and can produce a molecular profile equivalent to that of a 15-year-old plant in less than six months. Our biomimetic indoor farming technology is also independent of weather and climate change, making it extremely resilient.
